fardeen-ahamed

Hi, I'm a skilled professional with 1.9 yers of experience in various web development projects. Passionate about creating innovative and user-friendly applications.

EDUCATION

Siddaganaga Institute Of Technology (09/2020 - 06/2023)
Bachelor's of Engineering, Electronics and Telecommunication Engineering

WORK EXPERIENCE

Growth Metrics Technologies PVT LTD (05/2024 - 07/2025)
Full Stack Developer

- Built an automated SEO platform from scratch using **Next.js, Node.js, Express.js, Redux, MongoDB, Tailwind CSS, and Shadcn/ui**, scaling to **500+ active clients**
- Integrated **Google Search Console (GSC)** to surface website performance metrics including traffic, impressions, CTR, and top-ranking keywords
- Developed a **bulk URL indexing feature** that processed **100,000+ URLs** across client sites
- Engineered an **AI-powered content writer** that generates SEO-optimized articles with scoring and export functionality
- Implemented a **subscription-based billing system** using Razorpay, supporting plan management and payment lifecycle
- Built a **Next.js Admin Panel** for managing users, subscriptions, and platform-level controls
- Developed a **web analytics module** via a dynamically injected Script tag into client website Header tags, deployed across **500+ client sites**

https://www.grocliq.ai

Jaggery Consulting PVT LTD (07/2025 - Present)
Software Developer

- Built and owned all features of **seorce.com**, a full-stack SEO analysis platform serving **2,000+ clients** with fixes deployed to **1,000+ websites**
- Developed an **AI Content Studio** supporting multiple content templates, enabling scalable SEO-optimized content generation across client workflows
- Architected a **multi-node AI agent pipeline** using **LangChain and LangGraph** with streaming support — agent auto-generates multiple prompts, fans them out across LLMs, collects and analyzes responses to calculate **AI visibility, mentions, and citations** (Generative Engine Optimization)
- Built a high-performance **web crawler** using **Playwright** (headless browser) and **Go**, leveraging Go's concurrency model to reduce crawl time from **minutes to seconds for 10,000+ page sites**
- Surfaced **technical SEO issues** from crawls including metadata errors, JSON-LD schema problems, and content structure issues, with a one-click fix flow
- Implemented **SEO issue auto-remediation** via a dynamically injected Script tag into client websites, fixing issues without requiring code changes on the client side
- Designed and deployed the platform as a **microservices architecture**, contributing across all services end-to-end

PROJECTS

Rank Traq
RankTraq is an AI-powered SEO platform that combines keyword rank tracking with fully automated content generation. Users track live SERP positions and AI Overview appearances for their domains, while autonomous AI agents research, write, and publish SEO-optimized content on autopilot.

- Built and deployed **RankTraq**, an AI-powered SEO platform combining keyword rank tracking and automated content generation, developed using **Claude Code and Cursor**, hosted on **Google Cloud Run**
- Built a **keyword rank tracking dashboard** where users add domains and monitor live **SERP positions**, **AI Overview appearances**, and keyword movement over time
- Implemented a **credits-based billing system** with **Razorpay** integration, managing credit consumption per tracked keyword and subscription plan management
- Architected **autonomous AI agents** triggered via **Google Cloud Scheduler** that run end-to-end SEO content pipelines on a defined cron schedule
- Each agent performs full-cycle content generation: **web research via DuckDuckGo**, HTML parsing and analysis using **Tinyfish**, heading structure generation, content writing, quality analysis, and SEO metadata generation (titles, descriptions, schema)
- Implemented **post-publish automation** — agents auto-submit URLs to the sitemap and trigger **Google Search Console indexing** after publishing
- Built a **Next.js Admin Panel** with controls to manually trigger blog and feed agents, manage posts, and monitor Cloud Scheduler job status
- Configured **5 Cloud Scheduler jobs** (blog agent, feed agent, SERP tracker, AIO tracker, notifier) running on hourly and 12-hour intervals across GCP infrastructure
